## Demo V

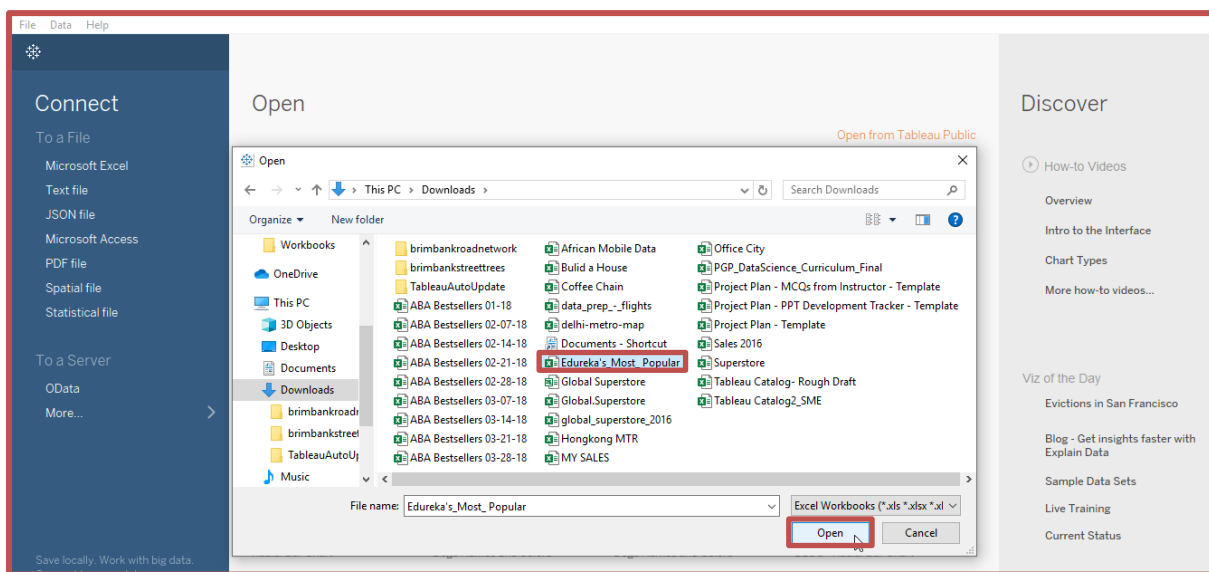

To replace the references.

Refer the dataset: Edureka's most popular.xlsx

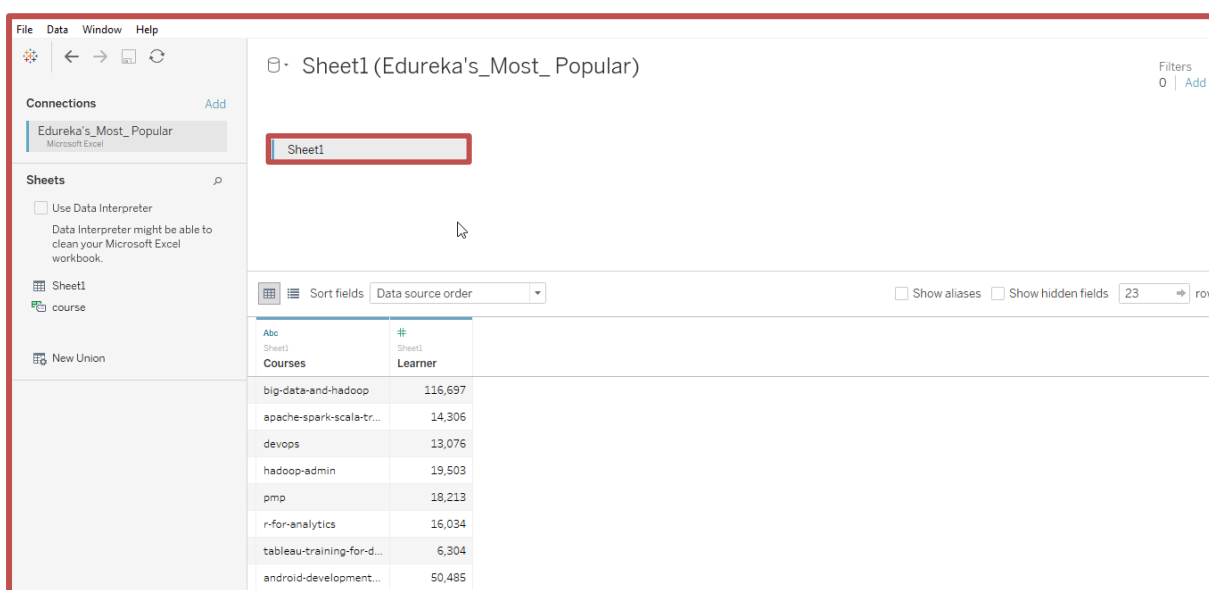

## Demo V Solution

We shall consider Edureka's course data set.

**Step 1:** Click on "Excel file" → Select "Edureka's most popular" → Open

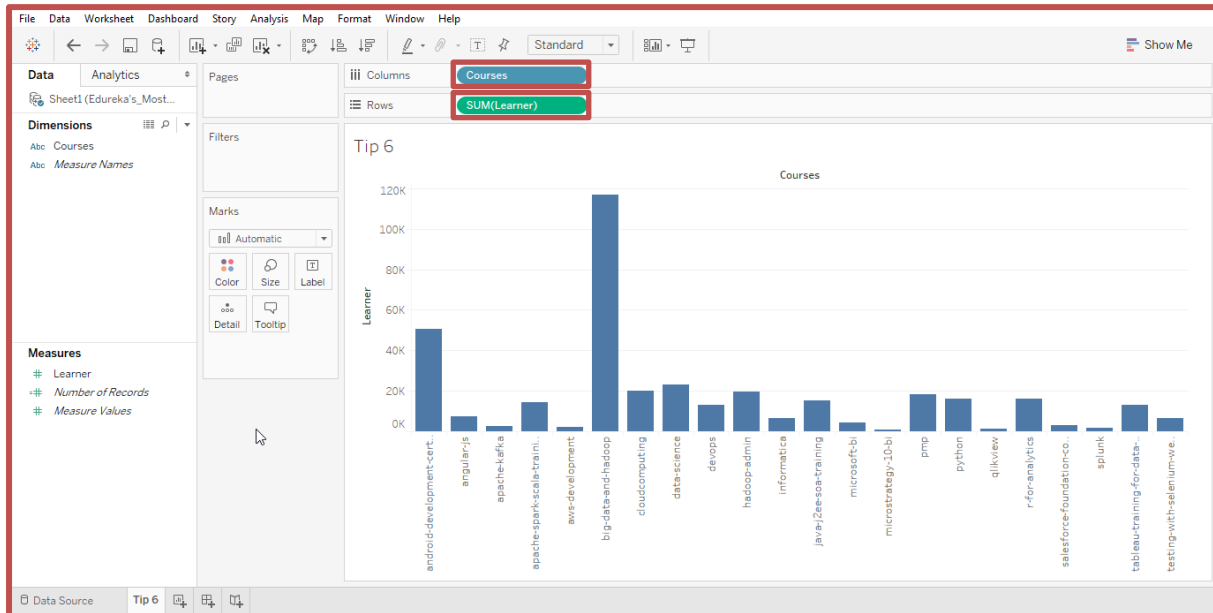

**Step 2:** Drag and drop the sheets that is "African mobile data" sheet on flow pane, select sales data and click on sheet (and rename it).

**Step 3:** Drag and drop the required fields from dimensions and measures to column and row shelf.

- Courses to columns
- Learners to rows

Suppose now learners are changed to customers and you must replace them and how do you do it?

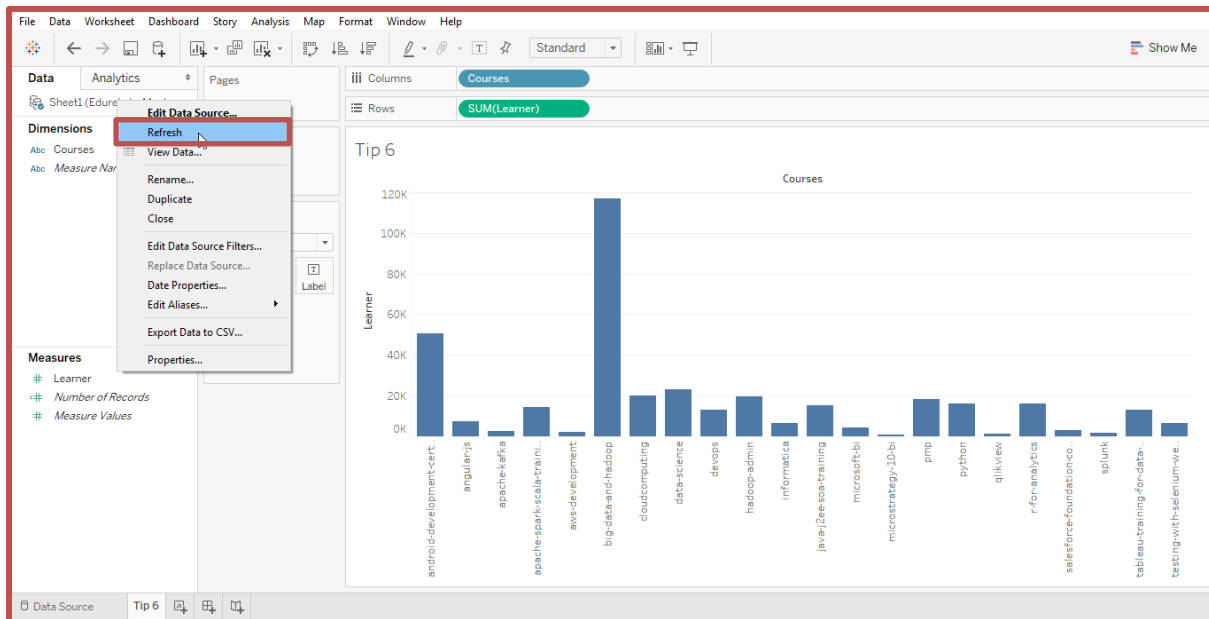

To learn that lets just change learners to customers in excel sheet.

The screenshot shows an Excel spreadsheet with the following data:

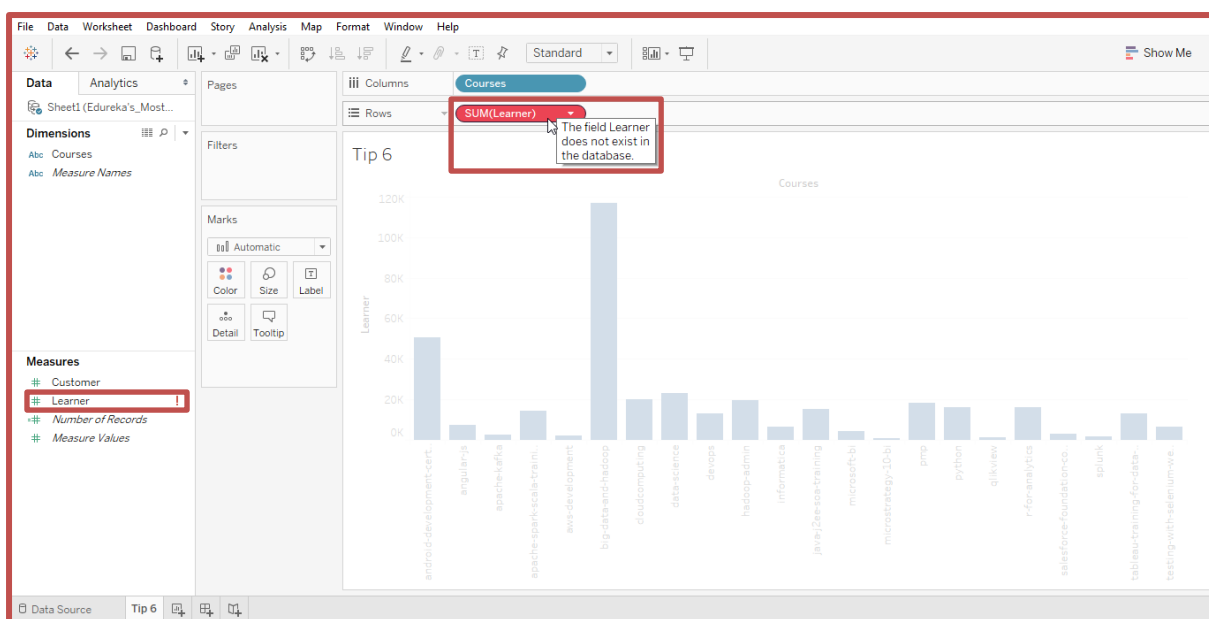

Courses	Customer
big-data-and-hadoop	116697
apache-spark-scala-training	14306
devops	13076
hadoop-admin	19503
pmp	18213
r-for-analytics	16034
tableau-training-for-data-visualization	6304
android-development-certification-course	50485
cloudcomputing	20126
python	16146
data-science	22981
informatica	6679
java-j2ee-soa-training	15271
salesforce-foundation-combo	2892
testing-with-selenium-webdriver	6430
angular-js	7598
microsoft-bi	4321
apache-kafka	2678
splunk	1796

**Step 4:** Save the excel sheet after making the necessary changes.

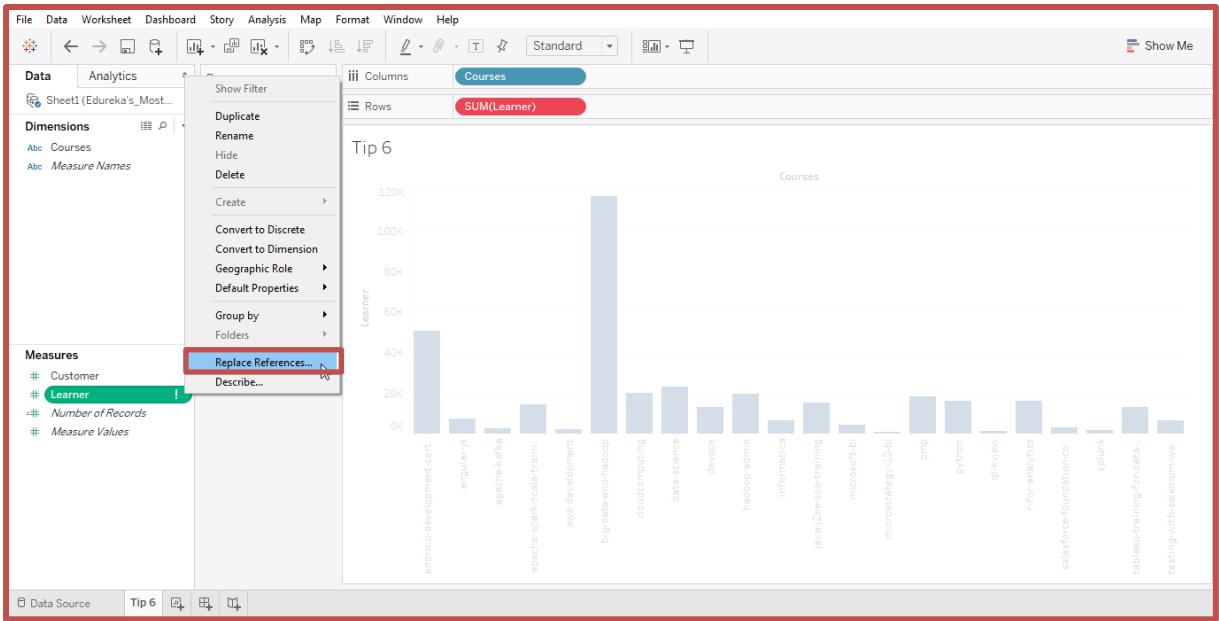

**Step 5:** Now, go back to Tableau worksheet and refresh the data source.

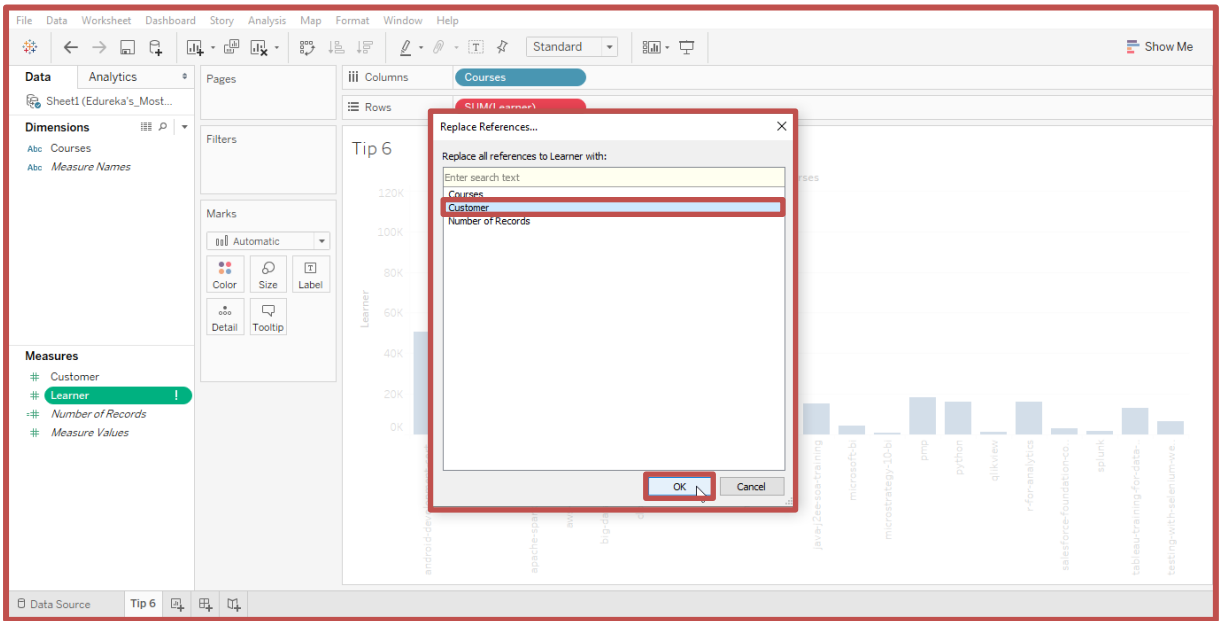

**Step 6:** After refreshing, you will visualize learners in the columns pane in red color indicating that data is not present.

**Step 7:** Now, click the dropdown of learners and select replace references.

**Step 8:** You can select the field which you have changed.

Now, you can observe that visualization is as before
